

LINKEDIN CONTENT PACK · TARA'S PROFILE

Month 1 — LinkedIn

A full month of referrer-focused LinkedIn content for Your Body Hub — a weekly clinical newsletter plus two posts each week, written to position the clinic as the reliable, professional rehabilitation practice for GPs and specialists in Officer and Melbourne's south-east.

Newsletters ×4 (weekly)

Posts ×8

Audience: GPs & specialists

Officer & south-east

Prepared by Ready to Rank · Draft for client sign-off

THE GOAL OF THIS PACK

Get in front of more local GPs and specialists and position Your Body Hub as a reliable, trustworthy rehabilitation practice in Officer and the south-east — the kind a doctor is confident referring to. The newsletter is the substance; the posts distribute it and build the relationship. Lead with the referrer's problem and the referrer's reputation, not a sales pitch.

■ Weekly newsletter ■ LinkedIn post (Tara)

Cadence: 1 newsletter + 2 posts per week — Tuesday (newsletter) · Wednesday & Friday (posts)

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
29 Jun	30 Jun	1	2	3	4	5
Week 1 · Back & Spine 6	NEWSLETTER 7 Back pain: not the end of the road Subscribe	POST 1 8 Why 'tried physio before' isn't the end	9	POST 2 10 Why your referral is safe with us	11	12
Week 2 · Knee & Post-Surgical 13	NEWSLETTER 14 Return-to-function after knee surgery Subscribe	POST 1 15 Post-surgical knee pathways	16	POST 2 17 Strength testing isn't guesswork	18	19

Back pain: why "tried physio before" isn't the end of the road

A WEEKLY CLINICAL NOTE FROM TARA · YOUR BODY HUB, OFFICER

Every week, GPs across Officer, Berwick and Pakenham send us patients whose back pain returned after a previous round of physio. Usually the problem wasn't effort — it's that the cause was never properly identified, and progress was never measured.

Back pain isn't one condition. Muscular, disc-related and nerve-related pain feel similar but need different plans — guess wrong, and you lose weeks.

So we start every patient with a thorough assessment: how they move, strength, load tolerance, and the contributing factors a short appointment never uncovers. Then we reassess against clear milestones.

For complex or recurrent back pain, that's where we add the most value — defensible progress, and a patient who's genuinely looked after.

Subscribe for a weekly clinical note — and I'm always happy to talk through a case. — Tara, Your Body Hub, Officer · **CTA: [Subscribe](#)**

Post 1 · Wed 8 July · newsletter lead

✉ This week's clinical note: **why "tried physio before" isn't the end of the road for back pain.**

When a patient hasn't improved, it's usually not the treatment — it's that the cause was never identified or the progress never measured.

If you refer for musculoskeletal or rehab care, this one's for you. 📧 Read & subscribe — link in comments.

— Tara, Your Body Hub, Officer · **CTA: [Subscribe](#)**

Post 2 · Fri 10 July · trust & positioning

When you refer a patient, you put your name on the line too.

For local GPs and specialists, a referral has to mean reliable communication, evidence-based care, and a patient who's genuinely looked after — not a black hole.

It's why we built our practice around thorough assessment, objective measures, and a physio–EP–myotherapy team under one roof in Officer — open 7 days, with Medicare, NDIS, TAC, WorkSafe and DVA pathways.

Return-to-function: knowing when a knee is truly ready

A WEEKLY CLINICAL NOTE FROM TARA · YOUR BODY HUB, OFFICER

After knee surgery or a significant injury, the hardest question is when a patient is genuinely ready to return to work, sport or daily life. "It feels okay" isn't enough.

We answer it with measurement. From the first two weeks — settle swelling, restore the quad, protect range — through to graded strength, we track strength, range and load tolerance against clear return-to-function criteria.

Working alongside orthopaedic teams, that means your patients progress safely, and you get honest, defensible reporting rather than guesswork.

For post-op and complex knees, measured rehab is the difference between a confident return and a re-injury.

Subscribe for a weekly clinical note — and referrers, I'm happy to talk through a case. — Tara, Your Body Hub, Officer · **CTA: [Subscribe](#)**

Post 1 · Wed 15 July · post-surgical pathways

Post-surgical knee rehab works best when it's structured — and measured.

We work alongside orthopaedic teams from the first two weeks through to graded strength and a clear return-to-function test — so there's no guesswork about when a patient is ready, and reporting comes back to you.

Referring post-op or complex knees? Let's talk.

— Tara, Your Body Hub, Officer · **CTA: [Refer / Connect](#)**

Post 2 · Fri 17 July · objective measures

"Strength testing isn't guesswork."

For knee rehab — arthritis, post-op, or persistent pain — we measure strength, range and load tolerance, and track them over time. It tells us what's working and when to progress.

It's also what lets us give your patients, and you, a clear and honest picture of recovery. Evidence-based rehab, measured.

NEWSLETTER · TUE 21 JULY

Catching injuries before they happen

A WEEKLY CLINICAL NOTE FROM TARA · YOUR BODY HUB, OFFICER

Most musculoskeletal injuries — on the field or on the job — are predictable, and largely preventable. Yet most care still starts after the damage is done.

Movement screening changes that. By assessing how someone moves under load, we can flag the issues that lead to hamstring strains, low-back injuries and manual-handling claims — and address them before they cost time off.

We work with local sporting clubs and employers across the south-east on screening, warm-up strategy and safe manual handling, and with WorkCover and TAC for those already injured.

For referrers and case managers: prevention is measurable, and far cheaper than recovery.

Subscribe for a weekly clinical note — and let's talk if you'd like to screen your team. — Tara, Your Body Hub, Officer · CTA: [Subscribe](#)

Post 1 · Wed 22 July · employers & clubs

For local employers and sporting clubs: most injuries are predictable — and preventable.

Movement screening and a simple warm-up strategy catch the issues before they become claims and time off. We work with teams and workplaces across the south-east on injury prevention and safe manual handling.

Want to reduce injuries on your site or in your club? Let's have a chat.

— Tara, Your Body Hub, Officer · CTA: [Enquire](#)

Post 2 · Fri 24 July · WorkCover & TAC

Injured at work, or in a motor vehicle accident? Physiotherapy is funded through WorkCover and TAC with an accepted claim.

For referrers and case managers: our team manages the rehab and the reporting, so your client can focus on recovering — with clear, measured progress.

— Tara, Your Body Hub, Officer · CTA: [Connect](#)

⚠ **Before publishing:** confirm current WorkCover & TAC claim rules — factual wording only, no eligibility promises.

NEWSLETTER · TUE 28 JULY

Falls prevention: the multidisciplinary approach that works

A WEEKLY CLINICAL NOTE FROM TARA · YOUR BODY HUB, OFFICER

A fall can change everything for an older patient — yet most care begins only after one happens. It doesn't have to.

Strength, balance and mobility are trainable at almost any age. We assess all three, then build a plan — in the clinic or at home — that keeps patients steady and independent, drawing on physiotherapy and exercise physiology together.

For GPs, aged-care and My Aged Care coordinators, that's a measured, proactive pathway that reduces falls risk rather than reacting to it.

If you're caring for an older patient who's had a fall or a near miss, earlier is always better.

Subscribe for a weekly clinical note — and I'm always happy to talk through a case. — Tara, Your Body Hub, Officer · CTA: [Subscribe](#)

Post 1 · Wed 29 July · GPs & aged care

Falls prevention is a team sport.

For GPs, aged-care and My Aged Care coordinators: we assess strength, balance and mobility, then build a plan that keeps older patients steady and independent — in the clinic or at home.

It's multidisciplinary, measured care that reduces falls risk, not just reacts to it. Referring an older patient who's had a fall or a near miss? Let's connect.

Post 2 · Fri 31 July · month recap

That's a wrap on this month's physiotherapy series.

Thank you to the GPs and specialists across Officer, Berwick and Pakenham who trust us with your patients — it's not something we take lightly.

Next month we turn to nutrition with our Accredited Practising Dietitian. Subscribe so you don't miss it — and my door's always open for a case chat.
